

Dr. Laila Yesmin is a management & leadership personnel with strong microbiology research background in agriculture, horticulture and environment. Her expertise encompasses soil-plant-microbe interactions, soil fertility and plant nutrition. Over the last 20 years Dr. Yesmin has been involved in biofertility & biopesticidal product development and regulatory affairs in the industry, government and university sectors. She has more than 12 international patents that generated several commercially successful microbial products in North America and international market place. She is one of the pioneers in biologicals and inoculant development for field crops in Canada. Dr. Yesmin obtained her Ph.D. from University of Aberdeen, Scotland and has several publications including book chapters. She is also a trained bioprocessing expert from the Utah State University and MIT (Massachusetts Institute of Technology). Dr. Yesmin is passionate about environmental sustainability and believes in 'go-green' technologies for agriculture.
